

RegAI — Agentic Regulatory Intelligence & Compliance

RegAI transforms RBI and SEBI circulars into structured, department-assigned action points — automatically. No manual reading. No missed deadlines.

The Problem

Indian banks receive hundreds of regulatory circulars every year. Compliance teams read them manually, interpret what needs to be done, figure out which department is responsible, and track completion in spreadsheets. This process is slow, error-prone, and unauditable.

The Solution

Upload a circular. RegAI reads it, extracts every actionable requirement, assigns each one to the correct department, and gives your team a live dashboard to track progress — with a built-in AI assistant to answer questions about the circular at any time.

Features

- **PDF Upload** — Drop any RBI or SEBI circular PDF directly into the app
 - **AI Extraction** — Gemini 2.5 Flash reads the circular and outputs structured Measurable Action Points (MAPs)
 - **Auto Department Assignment** — Each MAP is assigned to Compliance, IT, AML, HR, Operations, Risk, Legal, or Internal Audit
 - **Live Dashboard** — Filter by department or priority, track status in real time
 - **AI Compliance Chatbot** — Ask anything about the loaded circular and get instant answers
 - **Audit Trail** — Every status change is logged with a timestamp
 - **Export** — Download all MAPs as Excel or JSON
-

Tech Stack

Layer	Technology
UI	Streamlit
AI	Google Gemini 2.5 Flash

Layer	Technology
Database	SQLite
PDF Parsing	PyPDF
Language	Python 3.12

Project Structure

regulatory-ai/	
├─ app.py	UI and layout
├─ ai_engine.py	MAP extraction and completion validation
├─ extractor.py	PDF parsing and circular validation
├─ database.py	SQLite operations and audit logging
├─ models.py	MAP and CircularSession classes
├─ config.py	API keys, model config, department list
└─ utils.py	Excel export and summary statistics

Getting Started

Prerequisites

- Python 3.10 or higher
- A Google Gemini API key — get one free at aistudio.google.com

Installation

bash
<code>git clone https://github.com/Yugshri/regulatory-ai.git</code>
<code>cd regulatory-ai</code>
<code>pip install streamlit google-genai pypdf pandas openpyxl python-dotenv</code>

Configuration

Create a `.env` file in the root directory:

<code>GEMINI_API_KEY=your_api_key_here</code>

Run

```
bash
```

```
streamlit run app.py
```

The app opens at `http://localhost:8501`

How to Use

1. Open the app and go to the **Upload PDF** tab
 2. Upload any RBI or SEBI circular in PDF format
 3. Click **Extract Action Points**
 4. View extracted MAPs on the dashboard — filter by department or priority
 5. Update the status of each MAP as your team works through them
 6. Use the **AI Compliance Assistant** on the right to ask questions about the circular
 7. Download all MAPs as Excel or JSON when done
-

Example

Upload an RBI KYC circular and RegAI will output something like:

MAP	Department	Deadline	Priority
Complete re-KYC for all existing customers	Compliance	Within 6 months	High
Enable Video KYC at all branches	IT & Technology	Q3 2025	High
File suspicious transaction reports within 7 days	AML	Ongoing	High
Update IT systems for new KYC data fields	IT & Technology	December 2025	Medium
